

**METHOD FOR ATTACHING A FASTENER TO A SURFACE TREATING
MEMBER, AND SUCH AN ARTICLE HAVING A FASTENER**

ABSTRACT OF THE DISCLOSURE

5 A surface treating article including a surface conditioning member, a fastener
including a generally planar surface and a drive member, and a layer of adhesive between
the surface conditioning member and the planar surface of said fastener, where the layer of
adhesive includes rotational orientation. The present invention also provides a preferred
method of attaching a fastener to a surface conditioning member that includes inducing
relative rotation between a fastener and a surface conditioning member with a layer of
adhesive in contact with a planar surface of the fastener and the surface conditioning
member so as to soften the layer of adhesive and thereafter stopping the relative rotation
between the fastener and the surface treating member.
